

**Kitchen sink accessories are functional add-ons used on or around your kitchen sink to make washing, draining, and organizing easier. Common ones include soap dispensers, sink strainers, drain assemblies, drying racks, and under-sink organizers and faucets. Here's a quick rundown:**

## Main Categories

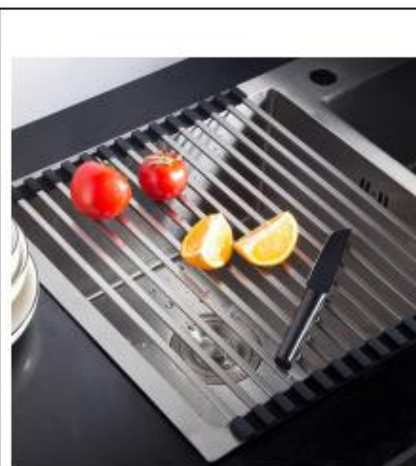

**1.Drainage system:** Sink strainers, pop-up drain stoppers, and drain baskets catch food scraps and prevent clogs.Includes the drain trap, basket filter, odor-proof core, and drain pipe, primarily addressing clogging and odor backflow issues.

**2.Water-draining Storage:** Drying racks, colanders, inner basins, and shelf holders allow washed dishes or fruits and vegetables to be placed directly on them to drain.

**3.Related to faucet products:** soap dispenser, pull-out faucet, water purifier faucet, and boiling water faucet, designed for daily cleaning and water usage.

**4.Sink Protection:** Sink mat, sink guard (sink grid), to prevent pots and dishes from bumping or scratching the sink bottom.

**5.Multi-functional Extension:** Cutting board, defrosting board, and cup washing tray, used in conjunction with the track system to enable single sink to perform more functions.

# Roosa Sink

EXCEPTIONAL QUALITY.  
TIMELESS PERFORMANCE.

Premium Stainless Steel Sinks  
For Discerning Global Partners.

## DESIGNED TO PERFORM

Expertly crafted sinks that blend precision, durability, and timeless design for professional spaces.

## SINK ACCESSORIES COLLECTION

### Key Points for Purchasing

**\*Material priority:** When in direct contact with food and tableware, 304 stainless steel is preferred for rust prevention and durability; Silicone drain pads should be made of food grade materials.

**\*Matching size:** Accessories such as drain baskets and sink guards must match the length, width, and depth of their own sink. Measure the size before buying, otherwise it won't fit or shake.

**\*The water dispenser is worth upgrading:** the original water dispenser basket is often prone to residue accumulation and odor return. Switching to a professional model with multi-layer filtration and anti odor core can save a lot of trouble in the future.

## SINK ACCESSORIES COLLECTION

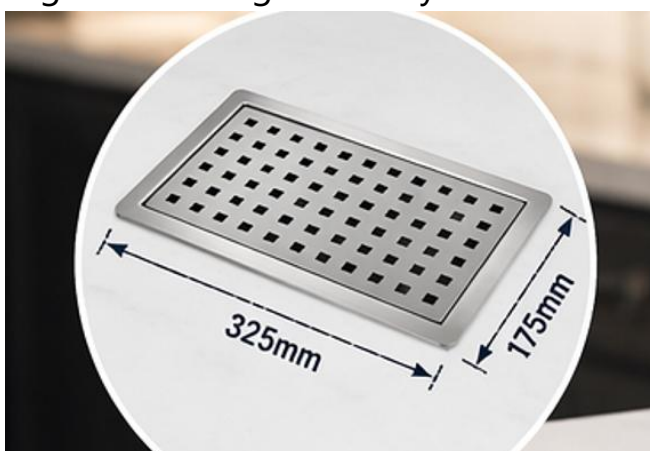

The Stainless Steel Glass Rinser Drip Tray is a tray placed beneath the glass rinsing station to catch water drips from rinsed glasses, primarily used in commercial settings like cafes and bars to prevent floor water accumulation and ensure glasses are ready to use immediately after cleaning.

**Material and Durability:** Typically made of 304 stainless steel, it resists rust and stains, making it suitable for high-frequency use.

**Structure and Drainage:** Features an inclined base for quick water drainage without residue; slip-resistant edges with rounded corners for easy cleaning.

**Dimensions:** Suitable for most commercial cup washers.

**Usage scenarios:** coffee shops, juice bars, home espresso stations, etc., keeping the counter dry and improving bar cleaning efficiency

**Model No.: DT3318S**

Diameter: 325x175x25mm

## SINK ACCESSORIES COLLECTION

**"Cold and hot faucet"** refers to a faucet that can provide both cold and hot water, and can control the water temperature by adjusting the handle or valve. In simple terms, it refers to the faucet commonly found in the kitchen or bathroom at home, capable of dispensing both cold and hot water. There are other terms used in English, such as **"Hot and Cold Water Faucet"**, **"Mixing Tap"**, and **"Dual-Handle Faucet"**.

### Common types

**Single-handle faucet:** Use one handle to adjust the water temperature left and right, and control the switch up and down. It is the most convenient to use.

**Double-handle faucet:** The left and right handles control cold and hot water respectively, and you need to adjust the ratio yourself.
